CA Technologies

CA Technologies areas of interest

CA Technologies is one of the largest software companies in the world with customers in all the Fortune 500 companies, government and utilities. CA Technologies develops and sells software that manages, governs and secures enterprise level IT infrastructures from mainframes to mobile devices. CA Technologies is a thought leader in the area of Cloud Computing.

FI-PPP interest areas

Services to consumers will be a feature of the future Internet. The pervasive nature of the future Internet will require automated management of data and endpoints in the “internet of things”. CA Technologies is ideally placed to contribute to the knowledge and technologies in this area.

CA Technologies is a sponsor and participant in the Cloud Commons Partner Community, and has a strong research and development interest in the governance, management and security of cloud services. CA Technologies believes that cloud services will be a deployment strategy of choice in the Future Internet.

CA Technologies also has a strong interest in new content, social computing, security/identity, energy management and government end user deployment.
