

# Mobility & Health – Asimelec Usage Area proposal

ASIMELEC : Spanish Industry Association of IT manufacturers, traders & distributors, that promotes and supports the development of electronic & communication companies in Spain. (+ 2,000 companies; 430,000 workers; revenues of some 3% of Spain's GDP)

## 1. Use case and scenario

Mobility and Health. Patients with special needs (chronic, elderly, often travellers around Europe).

Health service to be at par with health service of country of origin.

Players involved: patients, health centres, professionals and public and private health care providers.

## 2. Innovative Internet functionality and technology

Security of sensitive data management, digital identity, intelligent systems for the classification of medical terminology, application inter-operability (formats and common standards).

## 3. Identified functionalities expected from the Future Internet core technology platform

Main functionalities: Security, identification systems and interoperability

## 4. Experimentation environment

Countries with a high volume of “Medical Tourism” and with an important foreign population (Spain, Italy, Greece, Portugal, etc) as well as those inter-boundary areas, can be interesting contexts to experiment a range of healthcare internet based services

## 5. Potential role of ASIMELEC / HP

Interface with ICT companies in Spain- mainly with small companies and with healthcare administration and organisations.

Thank you!

Lola Ruiz - President of ASIMELEC's Health Commission
