

Medical Appointment Life-cycle Management: Go beyond SMS texting of reminders to a full appointment system covering: creation, notification, change (re-scheduling), gap filing, summary of visit key issues (dosage of medication, next appointment, etc), using mobiles together with other channels.

Role and partners to be incorporated:
EU [IC-MED project](#) members and Spanish [Coordina2](#) network of eHealth coordinators will bring along: **Healthcare organizations** interested in investing time and resources in the project, together with **local ICT SMEs** capable of integrating Hospital Information Systems (HIS) with the FI Platform.
