

# T&I Session Summaries

caretakers: Jim Clarke, Nick Wainwright, Volkmar Lotz

- ID provisioning approaches for the Future Internet
  - Networks using identifiers across many layers of the stack
  - Understanding the issue across MANA/T&I/Services domains
  - Next steps focus on short term (for PPP) for Valencia, and medium/long term
- How to Measure Trust
  - Promising initial experiments in trust measurement and vulnerability prediction
  - Discussion of
    - relating lab experiments to application for internet scale scenario
    - Availability and sharing data on vulnerabilities and incidents
  - many ideas about how to take this forward being discussed
- Smart Cities
  - Clear need and opportunity to engage T&I issues for smart cities infrastructure and services
- FIRE
  - A Safe place for testing attack scenarios at network and service level

# Feedback

- Less formal working sessions in between are valuable
  - 7 Oct. 09 prep workshop valuable for FIA Stockholm
- topics based approach did increase domain interactions;
- Have engaged more people (not just caretakers)
- Generated position papers and useful debate
- There will be more followup
  - eg. Collaborate on position papers even if controversial
  - Another interim meeting

# Topics for next time

FIA Valencia	Problem statement
eID Provisioning	Privacy and ID provisioning through the layers for short+med+long terms including due processes,

# Topics for next time

FIA Valencia	Problem statement
Security for the FI	<p>New threats demanding new alternative security approaches</p> <p>Secure SW Engineering: Systematic approaches, security by design</p> <p>Mix with social and economical aspects, user interface issues</p> <p>Legal connection with privacy and ID provisioning (responsibility, due processes)</p>

# Topics for next time

FIA Valencia	Problem statement
Trust for the FI	<p>User in the process: User making informed decisions based on awareness, Tools using simple vision analytics allowing to monitor what happens, then tools to deal with them.</p> <ul style="list-style-type: none"><li>· Transparency of procedures and undoing transactions</li></ul> <p>User interface issues, how to display warnings and means of allowing them to take actions. Reasonable expectation management</p>
